Western Resource Recovery Centre Location Consultation Submission Form

Part A. Site Selection Criteria

Based on technical specifications and industry best practice, there are 6 criteria (listed below) used to assess a particular location as a viable site for a Resource Recovery Centre.

Do you have any other criteria that you would add to the above site selection criteria?

☐ No, I agree with the criteria

☐ Yes, I would like to suggest the following criteria

_____

_____

_____

_____

_____

Part B. Suggest a potential site for consideration

The location you suggest must meet the necessary site selection criteria below to be considered a viable option.

1. Sufficient land size (e.g. more than 30,000m2)
2. Necessary vehicle and traffic allowances (e.g. roads able to support heavy vehicles)
3. Natural conditions and site history that are compatible with use of the site for this purpose
4. Appropriate buffer distances
5. Planning requirements (e.g. the Planning Scheme will allow the land to be used for this purpose)
6. Site ownership (e.g. Council owns the site or it could be purchased)

Enter the address of the location within the Western region of Ipswich City Council that you would like to be considered for a future Resource Recovery Centre

Address: _____

_____

Part C. Site Ranking Criteria

The 4 Main Site Ranking Criteria shown below are used to evaluate the potential sites that have met the minimum requirements set by the necessary site selection criteria and identify a preferred site.

Planning

The Planning Scheme and legislation must allow the land to be used for this purpose. If not, this potential site option cannot progress.

Other planning checks to be completed include:

- Zoning requirements
- Tenure
- Existing land use approvals
- Easements

Environmental

Assessing potential sites from an environmental perspective includes examining:

- The potential presence of and potential impact on flora, fauna and waterways
- The cultural significance of the land and how it has been used in the past
- Other sensitive receptors such as waterways or endangered species

Technical

Technical assessment of potential sites includes:

- Size of the land
- Topography and slops
- Accessibility of the site
- Access to utilities such as power

Financial

Assessing potential sites from a financial lens includes:

- The cost to construct a Resource Recovery Centre on this land
- The cost to purchase the land (if not already owned by Council)
- The cost of road upgrades if required
- Other potential costs (e.g. the cost to rehabilitate the land)

How would you order the 4 Main Site Ranking Criteria, in order of importance in terms of identifying a preferred site?

Please write the numbers 1 to 4 in the boxes beside the criteria with 1 being the most important and 4 being the least important.

Planning ☐

Environmental ☐

Technical ☐

Financial ☐

Part D. Submitter Information

Council is collecting your personal information ("Personal Information") for the purpose of gathering submissions to inform the Western Resource Recovery Centre site selection process. We will not disclose your personal information outside of Council unless we are required by law or you have given your consent.

For more information on how Council manages personal information, you can view Council's Privacy Statement and Personal Information Digest at www.ipswich.qld.gov.au/about_council/media/corporate_publications/privacy

First Name: _____

Last Name: _____

Email: _____

Contact number: _____

Suburb: _____

Thank you for providing your feedback on the Western Resource Recovery Centre Location Consultation.

Submissions will be reviewed and a report on preferred site locations will be developed in late 2023 for Council to review.
